# GT27<sup>™</sup>

The Liberty Link<sup>®</sup> GT27<sup>™</sup> system combines all the power of Liberty Link technology, supercharged with enhanced weed control and cutting-edge yield.

## THE NEXT ERA OF PERFORMANCE AND CONTROL

LibertyLink<sup>®</sup> GT27<sup>™</sup> soybeans offer all the power of LibertyLink<sup>®</sup> technology, supercharged with enhanced weed control and cutting-edge yield.

## FOUR REASONS TO BELIEVE

1. Elite genetics providing unprecedented yield performance.
2. First soybean trait to market enabling both Liberty and glyphosate herbicides, which offer growers the ability to dial up the post emergence weed control they need in-season.
3. Non-volatile chemistries with fewer restrictions for more flexible and effective weed control.
4. Also tolerant to a new HPPD/Group 27 mode of action for soybeans\*, pending EPA approval.

**\*There is currently no HPPD/Group 27 mode of action for soybeans registered for sale or use in the United States.**

LIBERTYLINK<sup>®</sup>  
GT27<sup>™</sup>

LibertyLink GT27 is not tolerant to all HPPD herbicides. HPPD herbicides currently on the market are prohibited for use with LibertyLink GT27 soybeans and may result in significant crop injury. ## LS-0319 LLGT27

0.3 RM

- » Two year yield data out yields all single-trait soybeans!
- » Impressive offensive yield potential
- » Average resistance to IDC, put on all but toughest soils

## LS-0719 LLGT27

0.7 RM

- » Very tough against IDC
- » Phytophthora and emergence scores make for excellent fit in tough wet soils
- » Last two years yield data shows superior yields to single-trait LibertyLink® lines

## LS-1019 LLGT27

1.0 RM

- » Excellent IDC defensive showing in 2018!
- » Excellent emergence!
- » Very good branching
- » Sets the new standard for yield with soybeans with LibertyLink® herbicide trait

## LS-1319N LLGT27

1.3 RM

- » Medium-tall plant with lots of branching
- » Very good IDC
- » Very good resistance to white mold
- » Out-yields glufosinate resistant soybeans in early Group 1 maturity
